

# Assessment Summary: K-Nearest Neighbors (KNN) Challenge

- **Candidate:** Qalb E Zahra Mashhadi
- **Assessment Date:** 23 April 2026

## Executive Summary

This assessment evaluated an in-depth understanding of the K-Nearest Neighbors (KNN) algorithm. Achieving an **"Expert"** tier rating, the performance demonstrates a strong command of core concepts including various distance metrics (Euclidean, Manhattan, Minkowski), feature scaling impacts, and the bias-variance tradeoff. The high success rate on calculation-heavy questions highlights a robust practical ability to implement both weighted and uniform KNN for classification and regression tasks.
