

Assessment Summary: Multinomial Classification & Advanced Logistic Regression

- **Candidate:** Qalb E Zahra Mashhadi
- **Assessment Date:** 16 April 2026

Executive Summary

This assessment evaluated advanced competencies in multi-class classification strategies within machine learning. The evaluation focused specifically on the mathematical foundations and algorithmic implementations of Multinomial Logistic Regression, Softmax activation functions, and One-vs-Rest (OvR) / One-vs-One (OvO) methodologies. The performance demonstrates a strong capability to handle complex, non-binary classification problems and a deep understanding of categorical cross-entropy loss optimization.
